CAREER OBJECTIVE

Results-oriented software developer with 4 years building scalable backend systems using Python and modern web frameworks. Experienced in designing REST-based interfaces, managing relational data stores, and deploying applications on cloud infrastructure. Seeking a backend role where I can contribute to high-impact products and grow expertise in distributed systems.

TECHNICAL EXPERTISE

Languages: Python, JavaScript, SQL, Bash

Frameworks: Flask, FastAPI, Django REST Framework

Databases: PostgreSQL, MySQL, Redis caching layer

DevOps: Docker, basic Kubernetes, GitHub Actions CI/CD pipelines

Testing: Automated test frameworks — pytest, unit and integration testing

Other: REST API design, Git version control, Linux command line, Agile

PROFESSIONAL BACKGROUND

Software Developer — Nexora Technology Sdn Bhd

03/2021 – 12/2023 | Petaling Jaya, Selangor

- Reduced API response latency by 40% through Redis caching and query optimisation.
- Developed REST APIs serving 12,000 daily active users with 99.7% uptime.
- Cut automated test execution time by 30% by parallelising pytest suite.
- Led a team of 4 developers to deliver the payment integration module.
- Responsible for managing the PostgreSQL database migration project.
- Worked on various backend features across 3 product lines.
- Involved in code review processes and sprint planning sessions.
- Assisted with monitoring and alerting setup on AWS CloudWatch.

Junior Backend Developer — Softech Solutions

07/2019 – 02/2021 | Shah Alam, Selangor

- Built internal REST API endpoints used by 3 client-facing applications.
- Migrated legacy PHP codebase to Python/Flask, reducing maintenance time by 25%.
- Participated in Agile sprint cycles with fortnightly releases.
- Responsible for writing unit tests for the authentication module.

EDUCATION

BSc (Hons) Computing and Information Systems

Universiti Teknologi MARA (UiTM) — Graduated: 06/2019 | CGPA: 3.41 / 4.00

Final Year Project: Automated deployment pipeline for microservices using Docker and GitHub Actions. Achieved 85% reduction in manual deployment steps.

PROJECTS

Smart Inventory System (Python / Flask / PostgreSQL)

Personal project — 2023

Built a real-time inventory tracking system with REST API backend. Deployed on AWS EC2 with automated backups. Used by 3 small businesses with 500+ monthly transactions processed. Implemented Redis for session caching — reduced page load time by 60%.

ML Data Pipeline (Python / pandas / scikit-learn)

Academic project — 2019

Developed an automated data preprocessing pipeline for a machine learning classification model. Achieved 91% model accuracy on test set. Processed datasets of 50,000+ records with automated feature engineering.

ADDITIONAL INFORMATION
